	1.	At that time the North Korean Ministr handling an epidemic and vaccine was approached for vaccine, and additions	on department wi y of Health was lacking. The Se il supplies were	cking. The Secul Vaccine Institute was supplies were acquired from the USER. It as received in the establishing of an			
	2.	Typhus vaccine was produced at a plan 1950. Biologicals were also produced at Heiju Sanatorium, and at Pyongyang antibiotic: is produced at the present Ch'innamp'o Starch Plant.	at Hambung, at	Chongjin Medical College,			
		Glucose made from corn at Ch'innamp'o Starch Plant is refined in Pyongyang into medically pure glucose solution.  The Japanese built a fertilizer and powder factory at Hungman in the 1930's. Various chemicals were produced also, as well as glycerine, dye and nitrogen derivatives. Oil for glycerine was supplied from fish hauls.  The dean of the medical School of Kim Il Sung University, Pyongyang; is Dr Chai Myung Eak. He was formerly professor of anatomy at Severin Medical Collage, Secul. Dr Lu Chung Bok, formerly professor of internal medicine at Secul Metical University, is now in North Morean Army. Dr Lu Man Sho.

formerly a pediatrician in Seoul, is now in Ministry of Public Seelth, Pyongyang. Dr Chu Sung Soon, formerly associate professor of pathology at Seoul Estimal University, is now vice-deen at Chongjin Medical College.

5. Availability of pharmacounticals and drugs in North Ecrea is fair. It is doubtful if immodulation of suburban children is more than partially completed. Price of vaccines and seria is high, and usually afforded only by the government. Buidenic control is not adequate, though Soviet assistance would probably be forthcoming as in cholera outbreak of 1986. An epidemic would continue only from spring till late fall, however, due to severe cold in winter.
